

CromaSlate

Reproduction Slate - 100% Recyclable

CROMASLATE

THE REPRODUCTION SLATE THAT IS
100% RECYCLABLE

Cromaslate represents a 100% recyclable lightweight uPVC alternative to conventional slate materials, offering an excellent substitute for natural slate without compromising on aesthetic appeal. Available not only in slate form but also in angled ridge and hip variants, Cromaslate ensures a seamless roof finish.

The Northamptonshire project truly showcases Cromaslate's top-notch performance. Installed by G&M Roofing's skilled team, sourced through L&D Roofing who is part of our reliable merchant network. Martin from G&M Roofing says "very good product for the job". Cromaslate stands out for its durability, offering a lightweight choice that's easily fixable, and long-lasting as an alternative for sheds, annexes, extensions, garages, and more.

Cromar's area manager Danny Wall says "Merchants looking to stock a high quality lightweight 100% recyclable slate that goes down to a 15° pitch and only 15 per m2. Looks as good as a natural slate, fire rated and a 40-year life expectancy. With no grading, drilling & up to 30% cheaper than other synthetic slates on the market".

Using recyclable materials like Cromaslate from Cromar is a great choice for environmentally conscious projects. Recyclability not only reduces waste but also helps conserve resources by allowing materials to be reused or repurposed. It's encouraging to see advancements in construction materials that prioritise sustainability.
