CONSERVATION WITH THE FUTURE OF
LEAD REPLACEMENT

CROMAR CASE STUDY

Leadax Original is one of the world's first lead free alternatives that offer the most desired aesthetics of lead but without the down sides that come hand in hand with the use of traditional lead such as theft and lead staining.

Cromar Building Products are the UK Distributors for the Leadax products and we have been supplying the lead-free alternatives for many applications, from new build porch flashings to reroof conservations up and down the country.

Here we show an example of a restoration reroof project showing the diversity of the Leadax Original product, the product is as malleable and workable as lead so those in the trade will be comfortable with using the product for the first time.

United Kingdom

Working alongside Roofstyle's Luke Jones, "The Leadax original was installed on a public house, a Black Country Ales pub called "The Robin Hood" in Willenhall. Roofstyle were appointed as the contractor for the client Radius Total Building Solutions Ltd. At the start of the job due to the high probability of theft if we were to use traditional rolled lead sheet, we contacted our suppliers Chandlers in Halesowen to see if they could recommend a lead substitute product that would be able to overcome the detail we faced on this project.

They then put us in touch with Danny Wall a sales representative from Cromar Building Products who was extremely attentive and helpful throughout the process and supplied us with the Leadax. From start to finish it was a fantastic project to be involved in and we look forward to many more like this in the future!

Working on historic and decorative buildings is something that the Leadax products lends to, within the range available in the UK is the Leadax Original, Leadax Easy (a full self-adhesive flashing) and the Instead of Lead equivalent to code 4.
